#Data2Life

# Data Analytics Innovation Vouchers

Forward-looking organisations are beginning to realise that it is not enough to analyse their data; they must also act on it.

- We provide grant funding to renowned researchers to solve real-life challenges
- Maximising your data by collecting, organising, linking and analysing various datasets
- Creating proof of concepts, feasibility studies and sharing best practice

# Already benefiting

Since 2014, we have worked with private, public sector and not-for-profit organisations. By bringing the latest insights out of the university and into society, we have been part of solving real world problems.

These collaborations influence and inform best practice all over the world.

# Data analytics support

Data is changing the world around you.  
This is your opportunity to use this power to enhance your organisation.

- Training
- Grant funded data analytics projects
- Webinars
- Workshops, challenge labs and events
- Consultation service

## Dr Kakia Chatsiou Senior Research Officer

[achats@essex.ac.uk](mailto:achats@essex.ac.uk)

Dr Kakia Chatsiou's research focuses on the areas of public administration evaluation, data science and natural language processing. Pushing new boundaries of research, she has worked as an evaluation and data compliance consultant with local authorities (including Essex and Suffolk County Councils and Essex Fire and Rescue Service) as well as voluntary sector organisations.

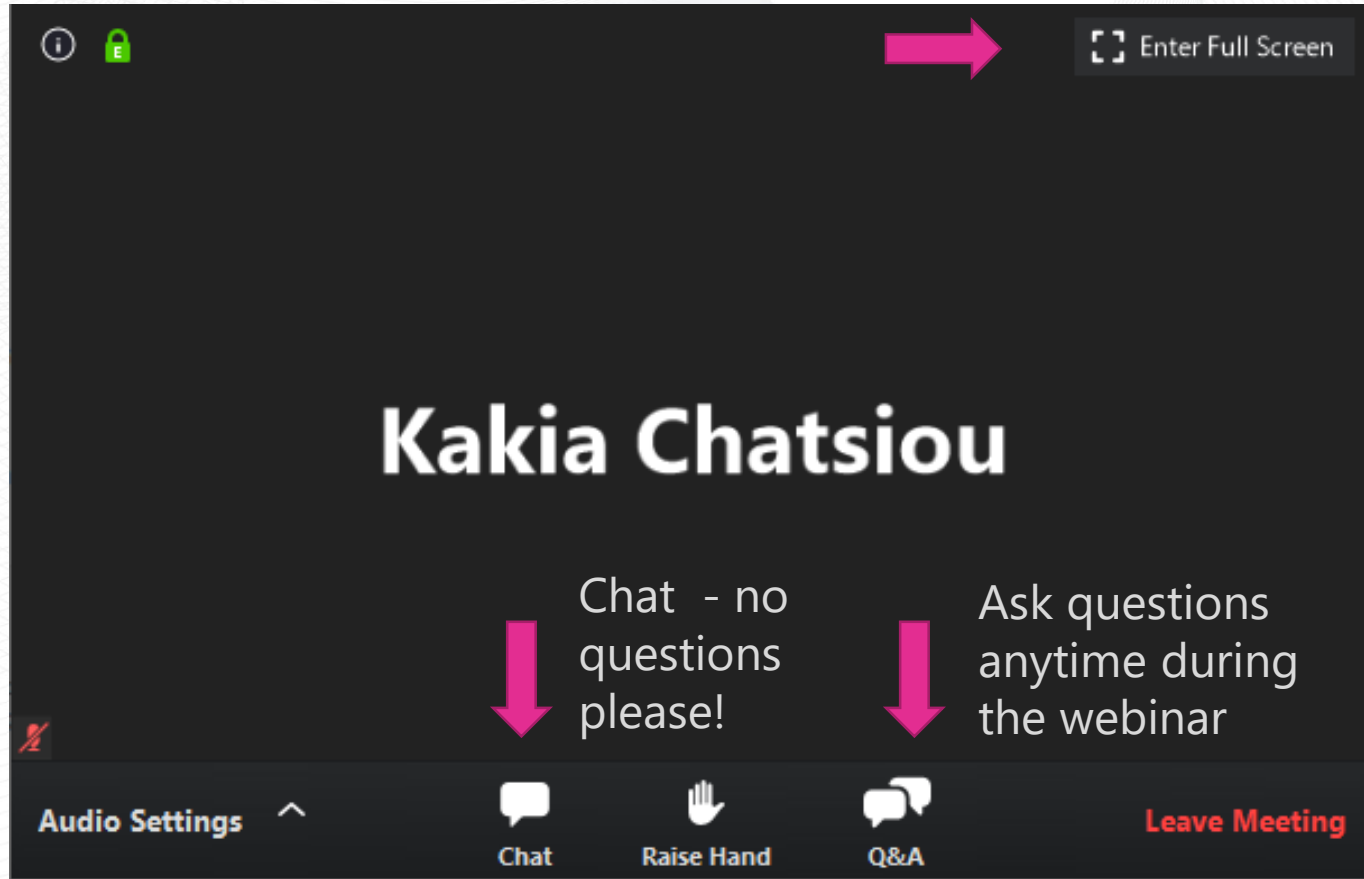

Dr Chatsiou leads training for policy makers on evaluation practices, text analytics and data sharing and acts as a catalyst for change at both a strategic and operational level. Interested in the ways data and evidence can help us better understand our society, she balances research expertise with sector knowledge, for impact from the grassroots up.

# Webinar Communication

meeting  
controls

# Poll 1: Which sector do you work for?

# Outline

- What is risk communication?
  - Why bother studying it?
- What can we learn from the previous examples of risk communication and its influence on behaviour change?
  - When can the use of data when communicating risk support or hinder effective risk communication?
- How can leaders improve the way they communicate risk during critical times?

The background is a vibrant pink color with a pattern of thin, curved lines that create a sense of depth and movement. A large, white, wavy shape is centered on the page, resembling a stylized letter 'C' or a wave. The text 'Communicating Risk' is written in white, sans-serif font across the middle of this white shape.

# Communicating risk: Fukushima (2012)

# Communicating risk: Fukushima (2012)

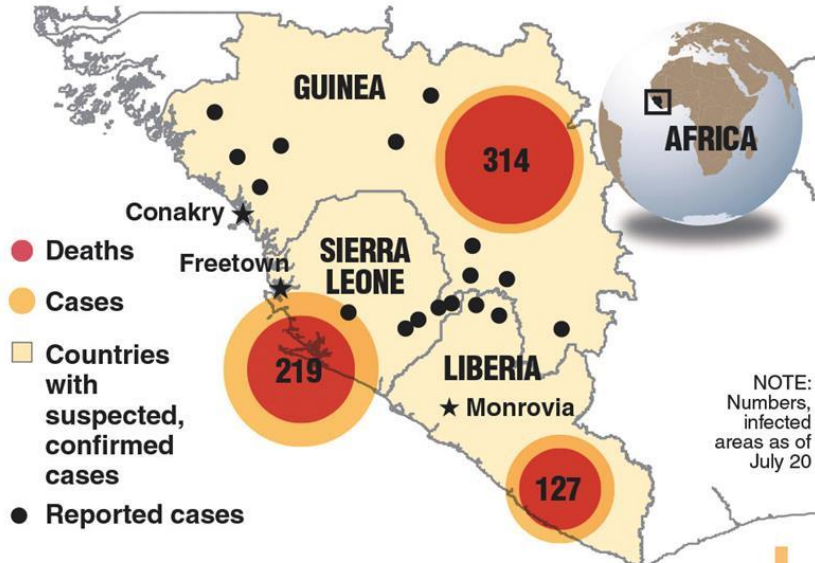

# Communicating risk: Ebola (2014)

## Closing borders

Several border crossings in Liberia have been closed to try to halt the spread of the deadly ebola virus.

You can't get Ebola through

Air

Water

Food

You can only get Ebola from:

Touching the **blood or body fluids** of a person who is sick with or has died from Ebola.

Touching **contaminated objects**, like needles.

Touching **infected animals**, their blood or other body fluids, or their meat.

# Communicating risk: Ebola (2014)

## EBOLA CAN SPREAD

The virus spreads through...

Bodies of the dead

Infected stool or urine

Fruit that has been eaten by an infected animal

Unprotected sex with an infected or recently recovered individual

Contact with infected people or animals

Infected medical equipment, soiled bed linen, dirty clothes

Infected blood and all other bodily fluids

Bush meat

If someone has been in an area known to have Ebola or in contact with someone suspected to have Ebola and they begin to have symptoms, they should seek medical care

# IMMEDIATELY

# Communicating risk: COVID-19 (2020)

## Coronavirus COVID-19

Coronavirus  
COVID-19  
Public Health  
Advice

### The Facts

#### Most at Risk

- Anyone who has been to an affected region in the last 14 days **AND** is experiencing symptoms
- Anyone who has been in close contact with a confirmed or probable case of COVID-19 (Coronavirus) in the last 14 days **AND** is experiencing symptoms

#### Prevention

**Wash**  
your hands well and  
often to avoid  
contamination

**Cover**  
your mouth and nose  
with a tissue or sleeve  
when coughing or  
sneezing and discard  
used tissue

**Avoid**  
touching eyes, nose,  
or mouth with  
unwashed hands

**Clean**  
and disinfect  
frequently touched  
objects and surfaces

#### Symptoms

- A Cough -> Shortness of Breath -> Breathing Difficulties -> Fever (High Temperature)

#### Affected Regions

Check the list of affected regions on [www.hse.ie](http://www.hse.ie)

#### What to do if you are at risk

**I've been to an affected region**  
in the last 14 days and

- 1. I HAVE symptoms
- 1. Stay away from other people
- 2. Phone your GP without delay
- 3. If you do not have a GP  
Phone 112 or 999

**I DO NOT HAVE symptoms**  
For advice visit [www.hse.ie](http://www.hse.ie)

**I've been in close contact with a confirmed or probable**  
case of COVID-19 (Coronavirus) in the last 14 days and

- 1. I HAVE symptoms
- 1. Stay away from other people
- 2. Phone your GP without delay
- 3. If you do not have a GP  
Phone 112 or 999

**I DO NOT HAVE symptoms**  
For advice visit [www.hse.ie](http://www.hse.ie)

**For Daily Updates Visit**  
[www.gov.ie/health-coronavirus](http://www.gov.ie/health-coronavirus)  
[www.hse.ie](http://www.hse.ie)

Ireland is operating a containment strategy  
in line with WHO and ECDC advice

HM Government

## Coronavirus Wash your hands more often for 20 seconds

Use soap and water or a hand sanitiser when you:

- Get home or into work
- Blow your nose, sneeze or cough
- Eat or handle food

**CORONAVIRUS**  
**PROTECT YOURSELF & OTHERS**

For more information and the Government's  
Action Plan go to [nhs.uk/coronavirus](http://nhs.uk/coronavirus)

### PLEASE PRACTICE SOCIAL DISTANCING

### BASIC PROTECTIVE MEASURES FOR COVID-19

### SITE SAFETY

**Avoid contact**

**Avoid touching  
your face**

**Stay at home if  
you are ill**

# Communicating risk: COVID-19 (2020)

## COVID-19 (coronavirus)

If you have been to **China, Thailand, Japan, Republic of Korea, Hong Kong, Taiwan, Singapore, Malaysia, or Macau** in the last 14 days and have any of these symptoms:

- If you are registered with a GP in Northern Ireland, please contact your GP **BY PHONE**.
- If you are NOT registered with a GP in Northern Ireland, please contact your local Emergency Department by checking [pha.site/emergency-healthcare-nidirect](http://pha.site/emergency-healthcare-nidirect)
- **Please do NOT attend the surgery or hospital without phoning in advance.**
- If it is a medical emergency, call 999 and inform the call handler of your recent travel.

If you have been to Hubei Province (including Wuhan) in the last 14 days and have no symptoms, please return home, contact the helpline on 0300 200 7885 and follow the advice below.

✓ Stay indoors and avoid contact with others as much as possible for 14 days after you arrive. 🏠

 <b>Do not go to work, school or public areas</b> 	 <b>Avoid visitors in your home</b> 	 <b>Do not use public transport or taxis</b> 
--	--	---

## COVID-19

Disease caused by the SARS-CoV-2 virus

### Novel coronavirus

Coronaviruses are viruses that **circulate among animals** but some of them are also known to affect humans.

The 2019 novel coronavirus was identified in China at the end of 2019 and is a new strain that has not previously been **seen in humans**.

### Prevention

When visiting China

- Avoid contact with sick people
- Avoid visiting markets and places where animals are handled
- Avoid contact with animals, their excretions or droppings
- Wash your hands with soap and water
- Apply general rules governing food hygiene

Wherever you travel apply general hygiene rules

### Symptoms

FEVER

COUGH

DIFFICULTY BREATHING

MUSCLE PAIN

TIREDNESS

### Transmission

VIA RESPIRATORY DROPLETS

**2–14** days  
estimated incubation period

# Communicating risk: COVID-19 (2020)

**COVER YOUR COUGH  
AND SNEEZE** 

Stop the spread of germs that make people sick

When you cough or sneeze  
cover your nose and mouth  
with a tissue  
or  
Cough or sneeze into your  
elbow, not your hands.

Throw away your tissue!

Clean your hands after  
coughing or sneezing.

**Thanks!**

 Building a Better Health Service |  Gorbaisle Health & Forestry |  hpsc |  RESIST

**Attention all visitors**

In response to the recent outbreak of the Coronavirus (COVID – 19) we ask all visitors to self-screen before entering the building, to help lessen the spread of the virus.

 **Do not enter if:**

1. You have signs of a fever or a high temperature (above 38°C)
2. You have a persistent cough or respiratory problems
3. You have had contact with any possible source of the virus

 If you have met any of the above criteria please return home and contact NHS 111 for advice

 If you are safe to enter please do so and follow the guidance below:

1. Wash your hands regularly and thoroughly with soap and water or alcohol based hand sanitiser
2. Avoid touching your face with your hands
3. If you need to cough or sneeze, use a tissue and bin after use
4. Where possible avoid contact with vulnerable individuals such as the elderly and those with underlying health conditions

8029 H

# Poll 2:

## How familiar are you with issues around communicating risk to users/clients and other stakeholders?

# Why is information important during an emergency?

## Crisis

- + Heightened public emotions
  - + Limited access to funds
  - + Uncertainty (rumour, gossip, speculation, assumption, inference)
- 

An **unstable** information environment

## Why is information important during an emergency?

- Need for rapid and effective assistance for those affected
- Basis for coordination and decision making
- Essential for building credibility, visibility and trust

[This Photo](#) by Unknown Author is licensed under [CC BY-ND](#)

# Characteristics of emergency/risk information

-  High demand for information
-  Urgent timeframe
-  Requires rapid and effective dissemination
-  use preferred channels of key audiences
-  existing information sharing networks
-  new media vs non-traditional media
-  misinformation
-  rumours

# What is risk communication? (1)

- Involves the **two-way real-time** exchange of information, advice and opinions between interested parties in order to:
  - Be informed about **what the risks are** and
  - Make decisions about **how to best manage them**

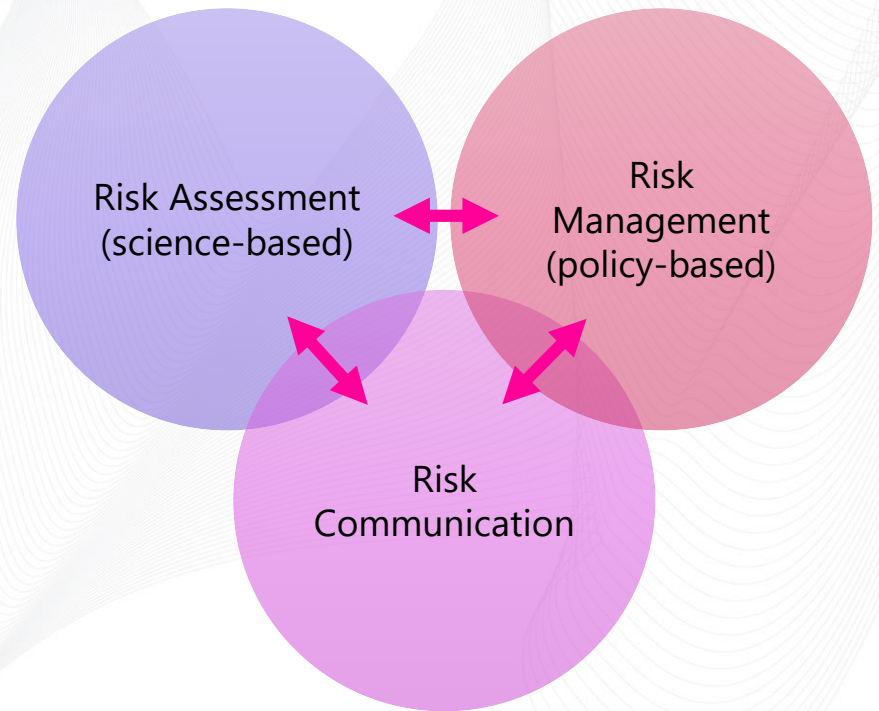

## What is risk communication? (2)

Includes multiple messages about the:

- **Nature of risk**
- **Concerns**
- **Opinions**
- **Reactions** to risk messages
- **Legal and institutional arrangements** for the management of risk

# What is the purpose of risk communication?

[This Photo](#) by Unknown Author is licensed under [CC BY-SA-NC](#)

To enable everyone at risk to take:

- **Informed decisions** to **mitigate** the effects of the threat (or hazard) and
- **Protective and preventative action** so that risks from the threat are minimised next time it occurs (lessons learnt)

*(IHR Working group on Risk Communication, 2009)*

# Risk communication building blocks

Technical  
information

Values

Expression  
of care

Credibility

TRUST

# Why communicate in an emergency?

Communication is an integral part of public health response to disease outbreaks and health emergencies.

1. People have the right to be **informed** about risks & how to protect themselves
2. Communication helps influence **behavior change**
3. **Misinformation** & **rumours** must be identified early and addressed
4. Frequent and frank communication builds support for the emergency response and builds and maintains **trust** → this is essential for people to follow our advice and support the response.

# Poll 3: Which aspects of risk communication are more relevant to you and your organisation?

# National & International Risk Communication Framework

# Risk Communication Frameworks (1)

- International Health Regulations (IHR, 2005) – World Health Organisation
  - Risk communication is a core capacity for mitigating the effects and outcomes of health events and emergencies

<https://www.who.int/ihr/publications/9789241596664/en/>

# IHR core capacity requirements

Legislation &  
Policy

Coordination

Surveillance

Response

Preparedness

Risk  
Communication

Human  
Resources

Laboratory

- national
- intermediate and
- local level

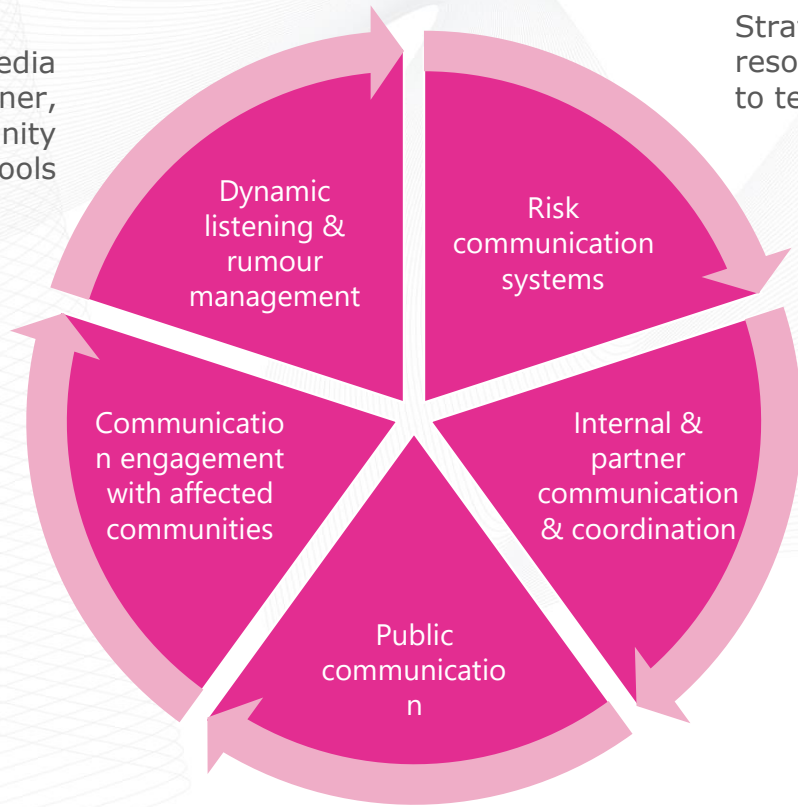

# IHR - An integrated model for emergency risk communication

Media and social media surveillance, partner, stakeholder, community feedback, other science tools

Strategies, plans, structures, resources, simulation exercises to test systems

Directly or through influences, including awareness campaigns, community radio, interpersonal communication, using existing community engagement mechanisms

Mechanisms at national, local, international levels with stakeholders (healthcare workers, NGOs, volunteers, civil society etc)

Media, social media, web, social mobilisation

# Risk Communication Frameworks (2)

- Pandemic Influenza Preparedness (PIP) framework (2011) – World Health Organisation
  - Risk communication is one of the 5 strategies

[https://www.who.int/influenza/resources/pip\\_framework/en/](https://www.who.int/influenza/resources/pip_framework/en/)

# Risk Communication Frameworks (3)

- The Orange Book – Management of Risk, principles and concepts (UK Government)
  - establishes the concept of risk management and provides a basic introduction to its concepts, development and implementation of risk management processes in government organisations

<https://www.gov.uk/government/publications/orange-book>

# Risk Communication Frameworks (3)

C4 Those assessing and managing risks should consult with appropriate external and internal stakeholders to facilitate the factual, timely, relevant, accurate and understandable exchange of information and evidence, while considering the confidentiality and integrity of this information. Communication should be continual and iterative in supporting dialogue, providing and sharing information and promoting awareness and understanding of risks.

C5 Communication and consultation should also assist relevant stakeholders in understanding the risks faced, the basis on which decisions are made and the reasons why particular actions are required and taken. Communication and consultation should:

- bring together different functions and areas of professional expertise in the management of risks;
- ensure that different views are appropriately considered when defining risk criteria and when analysing risks (see Section D);
- provide sufficient information and evidence to facilitate risk oversight and decision making; and
- build a sense of inclusiveness and ownership among those affected by risk.

# Risk Communication Frameworks (4)

- Humanitarian Action Framework
- WHO constitution
  - Health is a human right and social justice
  - Informed opinion and active co-operation of the public are of the utmost importance in improving public health

World Health  
Organization

# Risk Communication Frameworks (5) WHO Risk Communication Framework

Do no harm

Build trust

Announce  
early

Be transparent

Respect public  
concerns

Plan in  
advance

# Risk Communication Best Practice

# Risk communication process

# Guiding principles for risk communication

1. Create and maintain trust
2. Acknowledge and communicate even in uncertainty
3. Coordinate
4. Be transparent and fast with the first and all communications
5. Be proactive in public communication
6. Involve and engage those affected
7. Use integrated approaches
8. Build national capacity, support national ownership  
*(WHO, 2020)*

# 1. Create and maintain trust

- Fundamental:
  - Helps affected population
  - Accessible & functioning services
  - Transparency
    - even if you don't know it all!
  - Timely information
  - Easy to understand
  - Multiple channels
- Public health advice will be taken seriously if there is trust

## 2. Communicate in Uncertainty

- Risk communication occurs in a complex, shifting environment
- Information is usually incomplete
- Need to recognise that information and advice can shift as the emergency evolves
- need to **monitor rumours** and **misinformation**
- listen to concerns, show **empathy**

[This Photo](#) by Unknown Author is licensed under [CC BY-SA-NC](#)

## 3. Coordinate (before, during & after an emergency)

- Proactive internal communication
- Coordination with partners
- Ensure effective, consistent and trustworthy communication of risks
- Address information & public concerns

This Photo by Unknown Author is licensed under [CC BY-SA](#)

## 4. Be transparent, regular & fast

- In an emergency:
  - Communication should be fast, frequent and sustainable
  - First announcement frames risk and addresses concerns
  - Build rapport and trust
  - Include what is known and what is not yet known

[This Photo](#) by Unknown Author is licensed under [CC BY-SA-NC](#)

## 5. Be proactive

- Set the discourse
- Reach out to all stakeholders
- Build trust and rapport
- Prevent rumours & misinformation
- Demonstrate transparency
- Be sincere
- If you don't know, say it!

[This Photo](#) by Unknown Author is licensed under [CC BY](#)

## 6. Engage with communities

- At the heart of any emergency response
- Key to building trust, rapport during the crisis
- If engagement before the crisis, helps with resilience
- **Co-production** of emergency plans (prevention/recovery stage)
- let community know that they are **part of the solution**

[This Photo](#) by Unknown Author is licensed under [CC BY-SA-NC](#)

# 6. Engage with communities

## 7. Integrate different approaches

- Mix and match different approaches to fit your circumstances
- Use different channels
- Adapt your approach as the crisis evolves

[This Photo](#) by Unknown Author is licensed under [CC BY-NC-ND](#)

## 8. Build national capacity, support national ownership

- Strengthen policies
- review plans
- Train personnel
- Create/review processes and tools
- Involve all stakeholders (co-production)

This Photo by Unknown Author is licensed under [CC BY](#)

# Communicating Complex, Scientific & Technical Information

# Example: UK COVID-19 Press Briefings

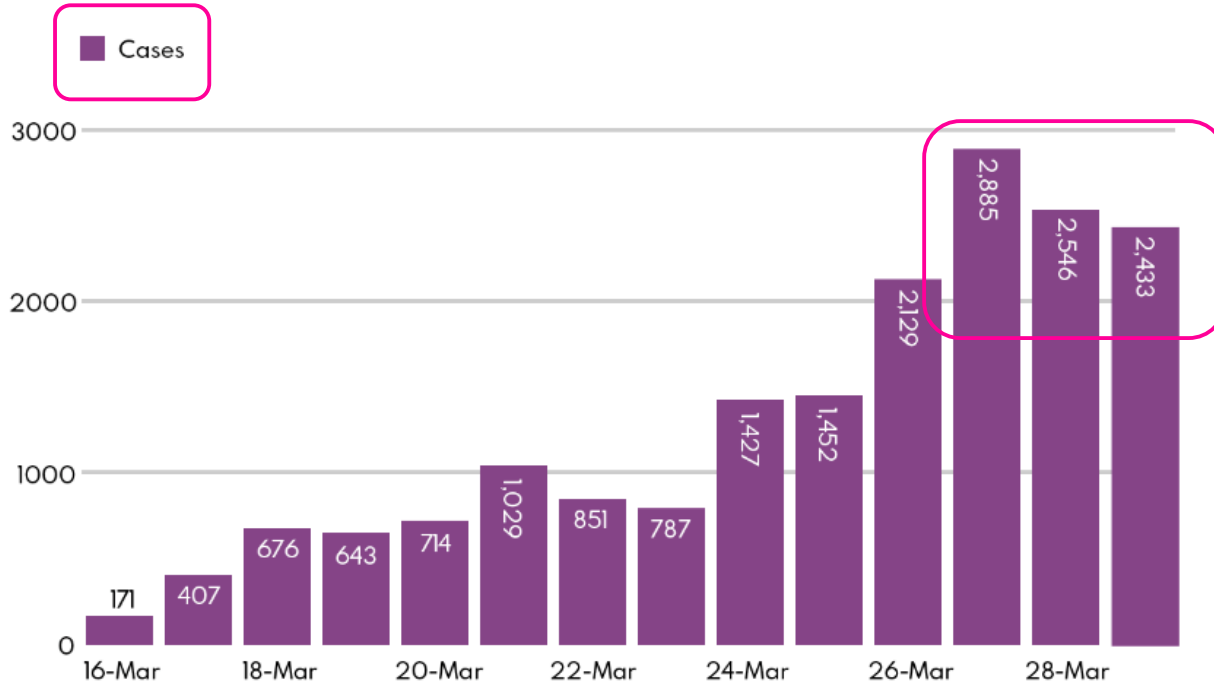

- How “New Cases” have been communicated over time up to now
  - what is included in each of Pillar(s)?
  - cases are initially aggregated, then broken down, then aggregated again
  - communication changes over time

**STAY HOME > PROTECT THE NHS > SAVE LIVES**

## New UK cases

Cases are reported when lab tests are completed. This may be a few days after initial testing. Testing capacity is increasing, which is resulting in a greater number of observed cases. (Confidence: testing capacity constraints mean there are likely many more cases than currently recorded here).

**STAY HOME > PROTECT THE NHS > SAVE LIVES**

## New UK Cases

Cases are reported when lab tests are completed. This may be a few days after initial testing. Testing capacity is increasing, which is resulting in a greater number of observed cases (Confidence: testing capacity constraints mean there are likely many more cases than currently recorded here).

Source: Department of Health and Social Care.

Pillar 1: NHS swab testing for those with a medical need and the most critical key workers. Pillar 2: Commercial-swab testing for critical key workers in the NHS, social care and other sectors.

*This is corrected from the version published on 10th April*

**STAY HOME > PROTECT THE NHS > SAVE LIVES**

## New UK Cases

Cases are reported when lab tests are completed. This may be a few days after initial testing. Testing capacity is increasing, which is resulting in a greater number of observed cases (Confidence: there are likely many more cases than currently recorded here). Pillar 1: swab testing in PHE labs and NHS hospitals for those with a medical need and the most critical workers and their families. Pillar 2: swab testing for key workers and their households.

## Annex: Statistical notes

### Testing and new cases (UK)

**Tests:** The [number of tests](#) includes; (i) tests processed through our labs, and (ii) tests sent to individuals at home or to satellite testing locations.

**Cases:** [Cases](#) are reported when lab tests are completed. This may be a few days after initial testing. Chart date corresponds to the date tests were reported as of the 24 hours before 9am that day. Only includes cases tested positive. There are more cases than confirmed here.

## Testing and new cases (UK)

### Testing

Some people are tested more than once.

**91,206** tests as of 17 May

**2,580,769** tests in total

### Confirmed cases

Only includes cases tested positive. There are more cases than confirmed here.

**3,142** cases confirmed as of 17 May

**243,303** cases confirmed in total

Due to technical issues, Northern Ireland have been unable to process any tests and new cases data for Pillar 1 testing today.

Source: NHS England and devolved administrations.  
Further details on data sources can be found here:  
<https://www.gov.uk/government/collections/slides-and-datasets-to-accompany-coronavirus-press-conferences>

**STAY ALERT ▶ CONTROL THE VIRUS ▶ SAVE LIVES**

## Annex: Statistical notes

### Testing and new cases (UK)

**Tests:** The [number of tests](#) includes; (i) tests processed through our labs, and (ii) tests sent to individuals at home or to satellite testing locations.

**Cases:** [Cases](#) are reported when lab tests are completed. This may be a few days after initial testing. Chart date corresponds to the date tests were reported as of the 24 hours before 9am that day. Only includes cases tested positive. There are more cases than confirmed here.

Due to technical issues, Northern Ireland have been unable to process any tests and new cases data for Pillar 1 testing today. Today's daily testing total reflects Pillar 1 for Great Britain, and Pillars 2 and 4 for the whole of the UK. Today's daily cases total reflects Pillar 1 for Great Britain and Pillar 2 for the whole of the UK. Historic Northern Ireland data is still included in cumulative totals and earlier daily totals.

## Reported cases (12 May 2020 – 28 May 2020)

- Pillar 1: swab testing in PHE labs and NHS hospitals for those with a clinical need, and health and care workers
- Pillar 2: swab testing for essential workers and their households, as well as other groups that meet the eligibility criteria as set out in [government guidance](#)
- Pillar 4: serology and swab testing for national surveillance supported by PHE, ONS, Biobank, universities and other partners to learn more about the prevalence and spread of the virus and for other testing research purposes, for example on the accuracy and ease of use of home testing

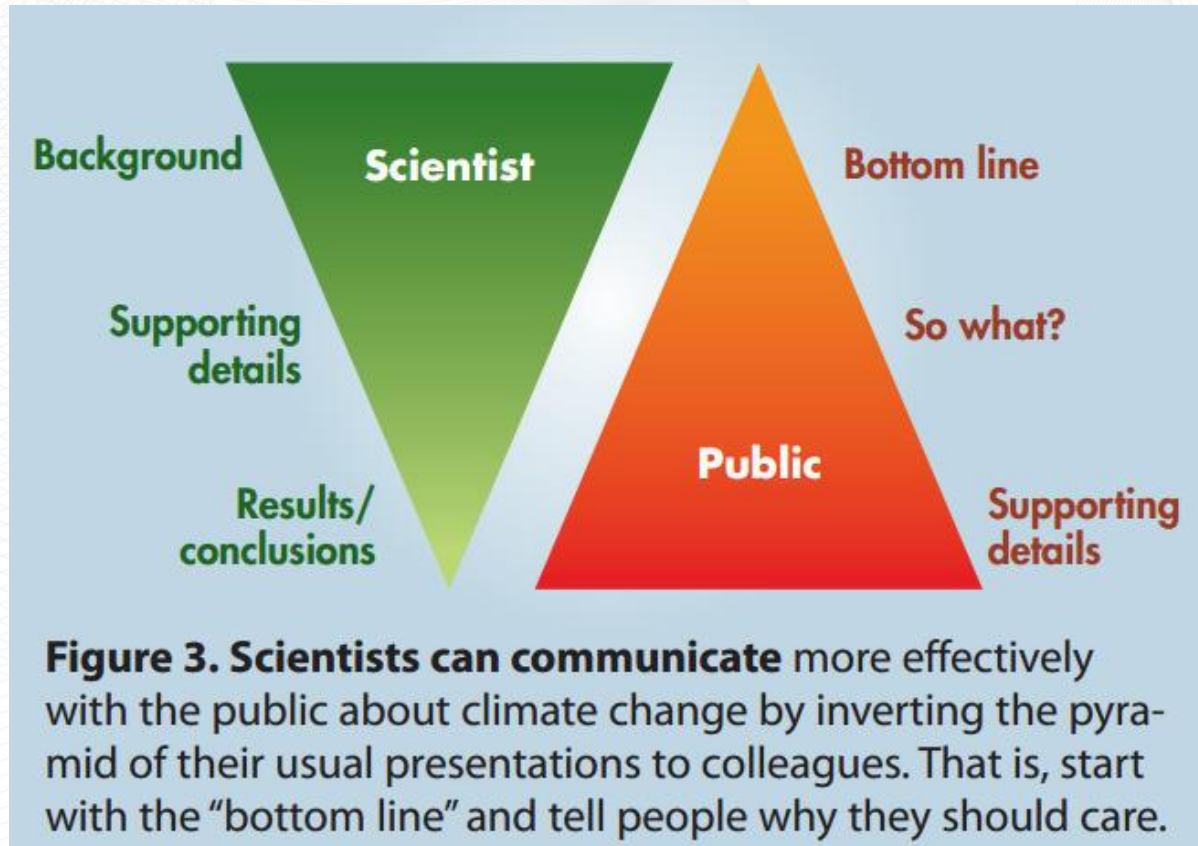

## Reported cases (29 May 2020 – )

- Pillar 1: swab testing in PHE labs and NHS hospitals for those with a clinical need, and health and care workers
- Pillar 2: swab testing for the wider population aged 5 and over, as set out in [government guidance](#)
- Pillar 3: serology testing to show if people have antibodies from having had COVID-19
- Pillar 4: serology and swab testing for national surveillance supported by PHE, ONS, Biobank, universities and other partners to learn more about the prevalence and spread of the virus and for other testing research purposes, for example on the accuracy and ease of use of home testing

# Communicating scientific information

# Communicating scientific information

To maximise usefulness and effective communication, information should be:

- relevant
- easily understood
- expressed through well-targeted messages
- use clear, non technical language
- discuss risks (nature, form, severity, magnitude)

# Communicating scientific information

- use **consistent names** and other terms throughout the crisis
- use familiar frames of reference (e.g. parts per billion, tons per day)

- don't switch between different units (e.g. hundreds to millions)
- don't change the unit of measurement (e.g. deaths in UK vs deaths in England in hospitals only)

# Communicating scientific information

- use **clear, consistent** terminology
- provide **definitions** in advance
- make sure all information is **explained fully**
- use **visuals** to clarify and support key communication points
  - carefully consider what types of visuals the news media might want

- don't use acronyms and jargon  
e.g. *excess lifetime cancer risk*

# Communicating scientific information

- use **analogies**
  - "the UK produces enough garbage in a day to fill 100 football fields 14 feet deep" vs
  - 250K tons of garbage per day
- make information **relevant**, not just numbers!
  - "Will it hurt me?"
- indicate **level of uncertainty**
  - "we are 85% certain, but we are conducting more studies to improve accuracy"

- don't exaggerate
- don't make examples dramatic

# Concluding Remarks

# Why communicate in an emergency?

Communication is an integral part of public health response to disease outbreaks and health emergencies.

1. People have the right to be **informed** about risks & how to protect themselves
2. Communication helps influence **behavior change**
3. **Misinformation** & **rumours** must be identified early and addressed
4. Frequent and frank communication builds support for the emergency response and builds and maintains **trust** → this is essential for people to follow our advice and support the response.

## Why is information important during an emergency?

- Need for rapid and effective assistance for those affected
- Basis for coordination and decision making
- Essential for building credibility, visibility and trust

[This Photo](#) by Unknown Author is licensed under [CC BY-ND](#)

# Guiding principles for risk communication

1. Create and maintain trust
2. Acknowledge and communicate even in uncertainty
3. Coordinate
4. Be transparent and fast with the first and all communications
5. Be proactive in public communication
6. Involve and engage those affected
7. Use integrated approaches
8. Build national capacity, support national ownership  
*(WHO, 2020)*

# Remember!

- communicate **early** and **frequently**
- **informed decisions** can help mitigate (health) risks
- **communication** is key
- effective and timely information helps build and maintain **trust**
- coordination can be at different levels: local, sub-national, national & international
